FOLLOW-UP NOTE

CHIEF COMPLAINT: Follow up of left shoulder pain.

HISTORY OF PRESENT ILLNESS: The patient presents today in followup with continued pain in the left shoulder.

ADL CAPABILITIES: As a direct result of the injuries sustained in this accident, the patient states that he is unable to do the following activities: driving, lifting heavy objects, carrying, reaching overhead, laundry, shopping, running errands, and exercising.

PRESENT COMPLAINTS: Left shoulder: Left shoulder pain is 2-3/10, described as intermittent, sharp, stabbing, dull, achy pain. The patient has stiffness. The patient is unable to reach overhead, but is able to reach behind the back. Worse with range of motion and improves with rest and physical therapy.

PHYSICAL EXAMINATION: The left shoulder reveals tenderness to palpation over supraspinatus tendon region and AC joint. There is crepitus appreciated. There is no heat, swelling, erythema or deformity appreciated. Negative drop arm test. Negative cross-over test. Negative empty can test. Positive Yergason test. Negative deltoid atrophy. Negative O'Brien test. Positive impingement sign. Positive Lift-off test. Positive Hawkins test. Range of motion, as per goniometer, abduction 120/180 degrees, adduction 40/45 degrees, forward flexion 145/180 degrees, extension 45/60 degrees, internal rotation 55/90 degrees, and external rotation 65/90 degrees. Internal rotation to the sacrum. The patient has no motor or sensory deficit of the left upper extremity.

DIAGNOSTIC TESTING: MRI of the left shoulder, done on 08/22/2022, shows tendinopathy of the supraspinatus tendon. AC joint is slightly separated with increased fluid present.

ASSESSMENT:

1. M24.812 Internal derangement, left shoulder.
2. M75.82 Shoulder tendinitis, left shoulder.
3. M75.42 Impingement, left shoulder.
4. M25.512 Pain, left shoulder.
5. S49.92XA Injury, left shoulder.
6. Type II acromion, left shoulder.

PLAN:

1. Imaging studies and clinical examinations were reviewed with the patient.
2. All treatment options discussed with the patient.
3. Cold compresses for left shoulder.
4. Continue anti-inflammatory and muscle relaxant medications p.r.n.
5. Continue physical therapy for left shoulder 3 days/week.
6. Recommend steroid injections with pain management for left shoulder. The patient refuses due to side effects.
7. Follow up p.r.n. pain and the patient not warranting intervention at this time.

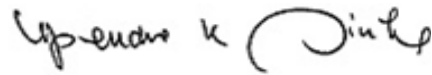

CAUSALITY: It is within a certain degree of medical certainty, that the history presented by the patient, the objective physical findings as well as the diagnosis rendered is causally related to the injury the patient incurred on the specified date. These current symptoms were nonexistent prior to the accident. Findings were discussed with the patient.

AFFIRMATION: Being duly licensed to practice medicine in the state of New York, pursuant to the applicable provisions of the Civil Practice Laws and Rules, I hereby affirm under penalty of perjury that the statements contained herein are true and accurate.
