Name: Ovalles De Barrio, Maria
DOB: 1/21/1983 AGE: 38 Years F
Study: MR - Shoulder Joint without Contrast-Left
Requesting Physician: Sharma, Maruti
MRN: SS-925328
Visit/Account: 3756930

Exam Date: 10/28/2021
Exam Time: 8:54 AM
Patient Location: RADIO---SSMC
Accession: 2372666

FINAL Radiology Report

STUDY: MRI LEFT SHOULDER

REASON FOR EXAM: S49.82 - Other specified injuries of left shoulder and upper arm;

TECHNIQUE: Standardized fat and water weighted pulse sequences were obtained in all 3 orthogonal planes.

COMPARISON: None.

FINDINGS:

There is a partial-thickness articular surface insertional supraspinatus tendon tear without full-thickness tendon rupture or retraction. There is no muscular atrophy.

The supraspinatus outlet is intact. The coracoclavicular ligament is normal in signal and thickness. The acromioclavicular joint demonstrates no significant arthropathy.

The glenohumeral articulation remains located. Articular cartilage and the glenoid labrum appear intact. The volume of glenohumeral joint fluid appears physiologic. The joint capsule appears intact.

The biceps tendon is intact to its labral attachment. Fluid within its tendon sheath is within physiologic limits.

No cortical or marrow abnormality is identified.

IMPRESSION:

Partial-thickness articular surface insertional supraspinatus tendon tear.
