UPENDRA SINHA, M.D.
1314 CONEY ISLAND AVENUE
BROOKLYN, NY 11230

PATIENT: GODWIN THOMAS

DOB: 06/09/1957

DOS: 11/30/2021

CHART #: 24081

EXAM: MRI OF THE RIGHT ANKLE WITHOUT CONTRAST

HISTORY: Pain.

TECHNIQUE: Multiplanar MR imaging of the right ankle was performed without contrast on Hitachi open MRI unit.

Sagittal T1 and fat suppressed weighted images, axial proton density T1 and STIR weighted images and coronal STIR and T2 images of the ankle were obtained without IV contrast.

COMPARISON: None.

Additional sanitizing / safety protocols recommended by the CDC were performed.

FINDINGS: The Achilles tendon is intact.

There is a focal contusion overlying the Achilles tendon.

The arch is unremarkable. Moderate edema is seen at the subtalar joint. There is no fracture or bone bruise.

The talar dome is intact. There is a focal contusion overlying the distal fibula seen in the coronal series.

Deep and superficial portions of the deltoid ligament show no laxity. There is increased signal distally at the deltoid ligament. A partial-thickness tear is noted. There is slight laxity of the anterior talofibular ligament medially seen on image #12 of series #3.

The anterior tendon group is unremarkable. The posterior tendons are unremarkable.

IMPRESSION:

1. A PARTIAL-THICKNESS TEAR IS SEEN DISTALLY AT THE DELTOID LIGAMENT. THERE IS NO LAXITY.
2. THERE IS A FOCAL CONTUSION OVER THE DISTAL FIBULA.
