PATIENT:	DRYSDALE, SHANALEE	EXAM DATE:	08/10/2022 11:18 AM
STUDY DESCRIPTION:	MRI KNEE WITH/WITHOUT CONTRAST (JOINT)	MRN:	DRY574313
DOB:	10/04/1988	REFERRING PHYSICIAN:	Zilberman, Igor DC
CLINICAL HISTORY	PAIN DUE TO ACCIDENT	GENDER	F

MAGNETIC RESONANCE IMAGING OF THE LEFT KNEE WITHOUT IV CONTRAST

HISTORY: Pain due to accident.

TECHNIQUE: Multiplanar, multi-sequence MRI of the left knee was performed without intravenous contrast.

COMPARISON: None available.

FINDINGS:

OSSEOUS STRUCTURES/MARROW: No fractures or osteonecrosis.

LIGAMENTS:

ANTERIOR CRUCIATE: There is hyperintense PD signal about the anterior cruciate ligament consistent with sprain sequelae.

POSTERIOR CRUCIATE: The posterior cruciate ligament is intact.

MEDIAL COLLATERAL LIGAMENT: The medial collateral ligament is intact.

LATERAL COLLATERAL LIGAMENT: The lateral collateral ligament is intact.

JOINT SPACES:

MEDIAL COMPARTMENT: Intact medial meniscus and articular cartilage.

LATERAL COMPARTMENT: Intact lateral meniscus and articular cartilage.

PATELLOFEMORAL COMPARTMENT: Articular cartilage intact.

SYNOVIUM/ JOINT FLUID: There is no joint effusion.

MUSCLES: No muscle edema or fatty muscle atrophy.

PATIENT:	DRYSDALE, SHANALEE	EXAM DATE:	08/10/2022 11:18 AM
STUDY DESCRIPTION:	MRI KNEE WITH/WITHOUT CONTRAST (JOINT)	MRN:	DRYS74313
DOB:	10/04/1988	REFERRING PHYSICIAN:	Zilberman, Igor DC
CLINICAL HISTORY	PAIN DUE TO ACCIDENT	GENDER	F

NEUROVASCULAR STRUCTURES: Normal in course and caliber.

EXTENSOR MECHANISM: There is edema surrounding the patellar tendon consistent with paratenonitis.

PERIPHERAL SOFT TISSUES: Significant edema noted in the prepatellar region compatible with trauma sequelae.

PLICAE: No plicae demonstrated.

IMPRESSION:

1. Anterior cruciate ligament sprain sequelae.
2. Significant edema in the prepatellar region compatible with trauma sequelae.
3. Edema surrounding the patellar tendon consistent with paratenonitis.
