Accession:	32873	MRN:	Hark7099

RIGHT SHOULDER MRI WITHOUT CONTRAST

HISTORY: Right shoulder pain status post motor vehicle accident

TECHNIQUE: Multiplanar, multi-sequence MRI of the right shoulder was performed without intravenous contrast.

COMPARISON: None available.

FINDINGS:

ROTATOR CUFF: There is supraspinatus and infraspinatus tendinitis. The subscapularis and teres minor tendons are intact. There is no rotator cuff tear.

MUSCLES: No muscle edema or fatty muscle atrophy.

AC JOINT: Intact. There is subacromial spurring which contributes to rotator cuff impingement. There is subdeltoid/subacromial bursal edema.

BICEPS TENDON: Intact long head of the biceps tendon.

LABRUM/LIGAMENTS: No labral tear. There is blunting/tearing at the posterior superior glenoid labrum with a 4 mm paralabral cyst.

GLENOHUMERAL CARTILAGE: Intact articular cartilage.

SYNOVIUM/JOINT FLUID: There is small glenohumeral joint fluid.

MARROW: Normal marrow signal.

NEUROVASCULAR STRUCTURES: Normal in course and caliber.

PERIPHERAL SOFT TISSUES: Normal.

IMPRESSION:

Blunting/tearing of the posterior superior glenoid labrum with a 4 mm paralabral cyst.
