PATIENT: GOMEZ LOUIS
DOB: 06/17/1986
PHYSICIAN: DR. MATHEW
EXAM DATE: 04/25/2022

CT SCAN OF THE RIGHT KNEE

INDICATION: Pain.

TECHNIQUE: CT of the right knee was performed with coronal and sagittal reconstructions without intravenous contrast.

FINDINGS: There are no acute fractures or dislocations. The articular surfaces are intact. There is no significant joint effusion. There are no soft tissue abnormalities. Please note that meniscal or ligamentous abnormalities cannot be well assessed on a CT examination and MRI may be useful for that purpose, as clinically indicated.

IMPRESSION: No acute fractures or dislocations.
