
MRI OF THE RIGHT SHOULDER WITHOUT CONTRAST

RE: LAMOUR, HANDKERSON
DOS: 09/29/2022
DOB: 09/11/1994
MRN: FC0012389

Referring Physician: Dr. Ross-Distin
Referring Physician Phone #: (845) 201-5909

CLINICAL INDICATION:

Right shoulder pain status-post motor vehicle accident.

TECHNIQUE:

MRI of the right shoulder utilizing multiple imaging sequences.

FINDINGS:

The acromioclavicular articulation is normal. No significant fluid is seen in the subacromial/subdeltoid bursa or the shoulder joint. No rotator cuff tears are seen. No labral tears are identified.

The bicipital and intraarticular portions of the biceps tendon are grossly normal. No areas of significant marrow signal abnormality are seen with signal from the muscular structures normal. The coracoclavicular ligament is normal.

IMPRESSION:

1. No evidence of internal derangement of the right shoulder. Please read above for complete report.

Thank you for the courtesy of this referral and we look forward to being of service to you in the future.
