3117 Buhre Avenue  
Bronx, NY 10461

Phone: (718) 764-5000  
Fax: (718) 239-6308

PATIENT NAME: Francisco De La Rosa Marte  
DOB: 3/9/1973  
DATE OF SERVICE: 1/7/2021  
REFERRING DOCTOR: Adnan A. Qureshi, M.D.

**MRI Left Shoulder:**

TECHNIQUE: Magnetic Resonance Imaging is Performed in Multiple Projections Utilizing T1/T2 Pulse Sequences.

**FINDINGS:**

The supraspinatus tendon hyperintensity at its greater tuberosity insertion suggests tendinitis. Possible partial tear component cannot be excluded. Frank rupture with muscular retraction has not developed.

The visualized glenoid labrum outlines anatomically. Biceps tendon is free from interruption. Some fluid extends along joint capsule and subdeltoid bursa. Osseous structures maintain unremarkable alignment and signal characteristics. Suspicion is not raised for fracture, subluxation or replacement process. Smooth humeral head. Acromioclavicular joint remains intact. Coracoacromial arch is without appreciable encroachment. No periparticular mass is declared. Axilla appears clear of lymphadenopathy.

**IMPRESSION:**

1. Evidence for rotator cuff tendinopathy.
2. Associated bursitis.
3. No discernible bony deformity.

Thank you for the courtesy of this consultation.
