MAGNETIC RESONANCE IMAGING OF THE LEFT KNEE

TECHNIQUE: Multiplanar, multisequential MRI was performed in the 30 degree tilt position.

HISTORY: The patient complains of left knee pain.

INTERPRETATION: Medial and lateral menisci are intact.

ACL, PCL, MCL and LCL complexes are intact.

Quadriceps, infrapatellar, popliteus and biceps femoris tendons and ITB are intact.

Chondromalacia lateral articular patellar facet.

No patellofemoral malalignment in neutral position. No other chondral defects identified.

No evidence for fracture or other intraosseous lesion.

Small synovial effusion.

No abnormal muscle signal intensity, infiltration of the infrapatellar fat pad.

No medial popliteal cyst noted.

Neurovascular bundles are unremarkable.

Exam partially limited by motion artifact.

IMPRESSION:

- Chondromalacia lateral articular patellar facet.
