PATIENT NAME: COSME, STEPHANIE
DATE OF BIRTH: 11/09/1987
MRN #: BR48535
DATE OF SERVICE: 10/06/2022 12:11:17 PM
REFERRING PHYSICIAN: JORDAN FERSEL, MD

EXAM: MRI OF THE RIGHT SHOULDER

INDICATION: 34-year-old female with a history of trauma with shoulder pain. Rule out rotator cuff tear.

TECHNIQUE: MRI of the right shoulder was performed using multiplanar and multisequence imaging.

FINDINGS: The rotator cuff tendon and muscle assembly outlines normally. The humeral head maintains a normal anatomical relationship with the glenoid. There is no abnormal marrow signal. The long head of the biceps tendon is within its normal anatomic position within the intertubercular sulcus. The long head of the biceps tendon does not demonstrate any evidence of tendon tear, tendinitis, or tenosynovitis. There is no significant joint or bursal effusion. The glenoid labrum appears intact. The acromioclavicular joint outlines normally. There is a type I downward sloping acromion.

IMPRESSION:

1. No evidence of rotator cuff tear.
2. Type I downward sloping acromion.

Thank you for the opportunity to participate in the care of this patient.

A handwritten signature in black ink, appearing to read 'Steven Meyerson', with a stylized flourish at the end.
