

To: Davis, Gordon  
Exam: MRI LEFT KNEE  
Exam Date: 08/22/2022 9:55 AM  
Accession: 30672

Patient Name: Harris-Brown, Jacqueline  
DOB: 08/27/1952  
Gender: F  
MRN: HarJ6619

**LEFT KNEE MRI WITHOUT CONTRAST**

**HISTORY:** Left knee pain status post motor vehicle accident

**TECHNIQUE:** Multiplanar, multi-sequence MRI of the left knee was obtained without intravenous contrast.

**COMPARISON:** None available.

**FINDINGS:**

**LIGAMENTS:** There is a partial tear of the anterior cruciate ligament. The posterior cruciate ligament is intact. There is laxity of the medial collateral ligament. The lateral collateral ligament is intact.

**MEDIAL COMPARTMENT:** There is extensive multifocal tearing of medial meniscus with medial extrusion of the body segment. There are broad regions of full-thickness chondral loss on both sides of the medial compartment with subchondral cystic changes and marginal osteophytes.

**LATERAL COMPARTMENT:** There is chondral thinning on both sides of the lateral compartment with marginal osteophytes.

**PATELLOFEMORAL COMPARTMENT:** There is partial thickness chondral loss at the medial trochlear sulcus. There are marginal osteophytes.

**MARROW:** Normal marrow signal.

**SYNOVIUM/ JOINT FLUID:** There is a joint effusion.

**MUSCLES:** No intramuscular edema or significant fatty muscle atrophy.

**NEUROVASCULAR STRUCTURES:** Normal in course and caliber.

**EXTENSOR MECHANISM:** The quadriceps tendon is intact. The patella tendon is preserved.

**PERIPHERAL SOFT TISSUES:** There is soft tissue edema about the knee most prominent anteriorly.

**IMPRESSION:**

Partial tear of anterior cruciate ligament.

**HIGHLINE**

Extensive multifocal tearing of medial meniscus with medial extrusion of body segment.

Tricompartmental arthrosis, severe within the medial compartment.

Joint effusion. Soft tissue edema about the knee.
