PATIENT NAME: KIDD, ROJAY
PATIENT DOB: 05/07/1993
CHART NUMBER: 044819
EXAM DATE: MARCH 30, 2022
REFERRING PHYSICIAN: DR. KOPACH, ALEKSANDR

MRI OF THE RIGHT SHOULDER

Clinical History: Pain; s/p injury.

Protocol: T1 and T2 axial and sagittal images

Findings: The acromioclavicular joint is intact. There is no fracture or edema of the distal clavicle.

There is increased signal in the supraspinatus and infraspinatus tendons consistent with tendinosis. Fluid is present in the subacromial/subdeltoid bursa and the glenohumeral joint. The subscapularis tendon is intact.

The humeral head is normal in position and appearance. There is no fracture or bone marrow edema. The long head of the biceps tendon is normally situated in the bicipital groove. The biceps anchor complex is intact.

The anterior and posterior labrum are intact. The inferior glenohumeral ligamentous complex is intact. The visualized musculature is normal in signal intensity. There is no subcutaneous mass or collection.

IMPRESSION:

1. INTACT ACROMIOCLAVICULAR JOINT WITH UNDERSURFACE HYPERTROPHY, WHICH MAY BE CAUSING IMPINGEMENT.
2. TENDINOSIS OF THE SUPRASPINATUS TENDONS WITH FLUID IN THE GLENOHUMERAL JOINT AND THE SUBACROMIAL/SUBDELTOID BURSA.

Thank you for the courtesy of this referral.
