Tel: (201) 945- MRI-7 • Fax: (201) 945-1466

PATIENT NAME: TAYLOR, JASMINE
PATIENT DOB: 05/16/1983
CHART NUMBER: 045262
EXAM DATE: JUNE 24, 2022
REFERRING PHYSICIAN: DR. CLARKE, COLIN

MRI OF THE RIGHT SHOULDER

Indication:

The patient was in a motor vehicle accident. This examination is requested to rule out tear.

Technical Factors:

Images were acquired in the axial, coronal, and sagittal planes utilizing multiple pulse sequences. Intravenous contrast material was not utilized in this examination. No previous examination is available for comparison at the time of this interpretation.

Findings:

There is no evidence of fracture. Medullary space signal intensity is preserved. Dislocation is not present. There is no significant glenohumeral joint effusion. The glenoid labrum is intact. There is no significant hypertrophy of the acromioclavicular joint. There is no evidence of rotator cuff tear. Soft tissue mass is not identified.

Impression:

No evidence of rotator cuff tear.

Thank you for the courtesy of this referral.
