INITIAL ORTHOPEDIC CONSULT EXAMINATION

CHIEF COMPLAINT: Left shoulder pain.

HISTORY OF PRESENT ILLNESS: A 37 -year-old right-hand dominant female involved in a motor vehicle accident on 07/23/2022. The patient was a front passenger and was wearing a seatbelt. The vehicle was struck on the rear driver side. The airbags did not deploy. The EMS arrived on the scene. The police were called to the scene of the accident. The patient did not go to any hospital that same day. The patient presents today complaining of left shoulder pain sustained in the motor vehicle accident. The patient was attending physical therapy for the last 2 months with no relief.

WORK HISTORY: The patient is currently not working.

PAST MEDICAL HISTORY: Noncontributory. There is no previous history of trauma.

PAST SURGICAL HISTORY: Noncontributory.

DRUG ALLERGIES: NO KNOWN DRUG ALLERGIES.

MEDICATIONS: The patient is taking pain medications p.r.n.

SOCIAL HISTORY: The patient smokes one-half pack of cigarettes per day. The patient drinks alcohol socially. The patient does not use recreational drugs.

ADL CAPABILITIES: As a direct result of the injuries sustained in this accident, the patient states that she is unable to do the following activities: driving, lifting heavy objects, carrying, reaching overhead, laundry, shopping, running errands, and exercising.

PRESENT COMPLAINTS: Left shoulder: Left shoulder pain is 10/10, described as intermittent, sharp, stabbing, dull, achy pain. The patient has stiffness and weakness. The patient is able to reach overhead, able to reach behind the back, and unable to sleep at night due to pain. Worse with range of motion and improves with rest.

REVIEW OF SYSTEMS: Temperature taken at the time of exam was 98.6 degrees Fahrenheit.

General: No fever, chills, night sweats, weight gain, or weight loss.

HEENT: No double vision, eye pain, eye redness, decreased hearing, earache, ear ringing, nosebleeds, sore throat or hoarseness.

Endocrine: No cold intolerance, appetite changes or hair changes.

Skin: Clear, no rashes or lesions.

Neuro: No headaches, dizziness, vertigo or tremor.

Respiratory: No wheezing, coughing, shortness of breath or difficulty breathing.

Cardiovascular: No chest pain, murmurs, irregular heart rate or hypertension.

GI: No nausea, vomiting, diarrhea, constipation, jaundice or changes in bowel habits.

GU: No blood in urine, painful urination, loss of bladder control or urinary retention.

Hematology: No active bleeding, bruising, anemia or blood clotting disorders.

Psychiatric: No anxiety, change in sleep pattern, depression or suicidal thoughts.

PHYSICAL EXAMINATION: The patient's height is 5 feet 6 inches, weight is 290 pounds, and BMI is 46.8. The left shoulder reveals tenderness to palpation over supraspinatus tendon region, AC joint, and proximal biceps tendon. There is crepitus appreciated. There is no heat, swelling, erythema or deformity appreciated. Negative drop arm test. Positive cross-over test. Positive empty can test. Positive Yergason test. Negative deltoid atrophy. Negative O'Brien test. Positive impingement sign. Positive Lift-off test. Positive Hawkins test. Range of motion, as per goniometer, abduction 115/180 degrees, adduction 35/45 degrees, forward flexion 130/180 degrees, extension 45/60 degrees, internal rotation 40/90 degrees, and external rotation 55/90 degrees. Internal rotation to the sacrum. The patient has no motor or sensory deficit of the left upper extremity.

DIAGNOSTIC TESTING: MRI of the left shoulder, done on 09/01/2022, shows correlation made with study of 04/24/2017. Synovial fluid in the glenohumeral joint without significant change from prior study. Distal anterolateral supraspinatus tendinosis/tendinopathy advanced from prior study. Advancing hypertrophic change in the acromioclavicular joint extending to abut the supraspinatus. 3 mm distal clavicular anterior subcortical erosion. Laterally downsloping acromion abutting the supraspinatus. Distal anterolateral subscapularis advancing tendinosis/tendinopathy. Anteromedial humeral surface irregularity underlying the subscapularis.

ASSESSMENT:

1. M24.812 Internal derangement, left shoulder.
2. M75.82 Shoulder tendinitis, left shoulder.
3. M75.42 Impingement, left shoulder.
4. M25.512 Pain, left shoulder.
5. S49.92XA Injury, left shoulder.
6. M89.312 Acromioclavicular joint hypertrophy, left shoulder.

7. M25.412 Joint effusion, left shoulder.
8. Type II acromion, left shoulder.

PLAN:

1. Imaging studies and clinical examinations were reviewed with the patient.
2. All treatment options discussed with the patient.
3. Cold compresses for left shoulder.
4. Continue anti-inflammatory and muscle relaxant medications p.r.n.
5. Continue physical therapy for 4 weeks for the left shoulder. If no improvement, will consider offering intervention.
6. Recommend steroid injections with pain management for left shoulder. The patient refuses due to side effects.
7. Follow up in 4 weeks.

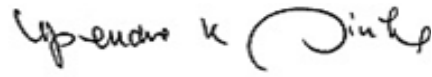

CAUSALITY: It is within a certain degree of medical certainty, that the history presented by the patient, the objective physical findings as well as the diagnosis rendered is causally related to the injury the patient incurred on the specified date. These current symptoms were nonexistent prior to the accident. Findings were discussed with the patient.

AFFIRMATION: Being duly licensed to practice medicine in the state of New York, pursuant to the applicable provisions of the Civil Practice Laws and Rules, I hereby affirm under penalty of perjury that the statements contained herein are true and accurate.
