PATIENT NAME: Jimmy J Troncoso

DOB: 4/19/1991

DATE OF SERVICE: 10/1/2021

REFERRING DOCTOR: Howard I. Baum MD

MRI Left Shoulder:

TECHNIQUE: Multiplanar and multisequential MRI examination of left shoulder was performed.

FINDINGS: There is a normal signal of the marrow. There is no fracture line noted.

There is downsloping of the acromion. The acromioclavicular joint is unremarkable. There is a type II to III acromion.

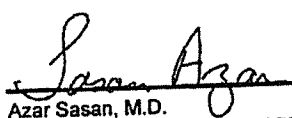

The rotator cuff tendons are intact.

There is no displaced labral tear. There is no paralabral cyst. The long head of the biceps tendon and short head are intact. There is fluid noted within the bicipital groove compatible with the bicipital tenosynovitis. The superior glenoid labrum and biceps anchor are intact. There is no Hills-Sachs lesion. There is no soft tissue mass. There is no joint effusion.

IMPRESSION:

1. Type III acromion with downsloping of the acromion resulting in narrowing of the supraspinatus outlet.
2. Bicipital tenosynovitis.

Thank you for the courtesy of this consultation.
