**PATIENT:** HENRY, PATRICIO  
**FILE#:** 042505  
**DOB:** 01/18/1994  
**DOS:** 07/21/2022  
**PHYSICIAN:** DR. KOPACH, ALEKSANDR

### **MRI OF THE LEFT KNEE**

**Clinical History:** Pain; s/p injury.

**Protocol:** T1 and T2 axial and sagittal images

**Findings:** The anterior and posterior horns of the medial and lateral menisci are normal in configuration. There is no acute medial or lateral meniscal tear.

There is partial tear of the anterior cruciate ligament with intraarticular joint fluid. The posterior cruciate ligament is normal. There is a sprain of the medial collateral ligament. The lateral collateral ligamentous complex is intact. The quadriceps tendon and patellar tendons are normal.

Fluid is present in the suprapatellar bursa. The medial and lateral patellar facets demonstrate normal cartilaginous thickness and retinacular attachments.

There is chondral thinning and subchondral signal abnormality present in the articular and anterior aspect of the lateral femoral condyle. A small bony island is present in the anterior aspect of the medial femoral condyle.

There is no tibial fracture. The popliteus tendon is intact. The gastrocnemius muscles are normal in signal intensity.

The popliteal fossa is unremarkable.

### **IMPRESSION:**

1. PARTIAL TEAR OF THE ANTERIOR CRUCIATE LIGAMENT WITH INTRAARTICULAR JOINT FLUID.
2. GRADE I SPRAIN OF THE MEDIAL COLLATERAL LIGAMENT.
3. CHONDRAL THINNING AND SUBCHONDRAL SIGNAL ABNORMALITY IN THE ARTICULAR AND ANTERIOR ASPECTS OF THE LATERAL FEMORAL CONDYLE.

Thank you for the courtesy of this referral.

\*\*\*\* Electronically Signed \*\*\*\*
