Dear Dr. Kopach:

MRI OF THE LEFT KNEE**TECHNICAL FACTORS:**

Noncontrast MRI of the left knee performed utilizing multiplanar and multisequence acquisition.

FINDINGS:

There is no fracture, dislocation or bone lesion. The bones and muscular structures demonstrate normal signal intensity. There is no muscular tear or evidence of hematoma formation.

Joint effusion is present. Retinacular ligaments are intact as is the quadriceps and patellar tendon.

Sprain injury is seen at distal anterior cruciate ligament and proximal lateral collateral ligament. Posterior cruciate ligament and medial collateral ligament are intact. Inferior surface horizontal tear is seen at middle one-third of the posterior horn of the lateral meniscus. Menisci are otherwise intact.

IMPRESSION:

- Inferior surface horizontal tear is seen at middle one-third of the posterior horn of the lateral meniscus with joint effusion.
