ALEXANDER NIYAZOV, P.A.
79-09 B NORTHERN BLVD
JACKSON HEIGHTS, NY 11374

PATIENT: SAUL SUCUZHANAY SINCHI
DOB: 07/14/1991
DOS: 02/27/2020
CHART #: 21008
EXAM: MRI OF THE LEFT KNEE WITHOUT CONTRAST

HISTORY: Medial and lateral frontal pain, rule out pathology.

COMPARISON: None.

TECHNIQUE: Multiplanar MR imaging of the left knee was performed without contrast on Hitachi open MRI unit.

Coronal PD, T2 and STIR; Sagittal PD and PD fat suppressed; axial T2 and T2 fat suppressed of the knee were obtained.

FINDINGS: The patellofemoral compartment shows no evidence of chondromalacia. There is no tracking abnormality. The lateral collateral ligament is unremarkable. There is a grade I injury of the medial collateral ligament. The quadriceps and patellar tendons are intact. There is a focal contusion overlying the proximal patellar tendon. There is no subluxation. Posterior cruciate ligament is unremarkable. There is slight disorganization of the fibers of the ACL proximally. A tear is noted. The menisci are intact. There is myxoid signal at the medial meniscus. There is no muscular injury. There is no Baker's cyst. There appears to be some varicosities posteriorly at the medial gastrocnemius laterally.

IMPRESSION:

1. AN INTERSTITIAL TEAR OF THE PROXIMAL ACL IS SEEN AS NOTED. THERE IS NO ATTENUATION OR LAXITY.
2. THERE IS A FOCAL CONTUSION OVERLYING THE PROXIMAL PATELLAR TENDON.

Thank you for referring this patient to us.
