PATIENT NAME: BEECH, DEBORAH
PATIENT DOB: 06/01/1973
CHART NUMBER: 044600
EXAM DATE: APRIL 03, 2022
REFERRING PHYSICIAN: DR.KOPACH, ALEKSANDR

MRI OF THE RIGHT SHOULDER

Clinical History: Pain; s/p injury.

Protocol: T1 and T2 axial and sagittal images

Findings: The acromioclavicular joint is intact. There is no fracture or edema of the distal clavicle. There is bony hypertrophy on the undersurface of the joint impinging upon the myotendinous junction.

There is a high grade partial tear of the distal supraspinatus tendon involving both the synovial and bursal surfaces of the distal tendon near the attachment site. Fluid is present in the subacromial/subdeltoid bursa.

There is tendinosis of the infraspinatus tendon. The subscapularis tendon is intact.

The humeral head is normal. There is no fracture or bone marrow edema. The long head of the biceps tendon is normally situated in the bicipital groove.

There is fluid in the glenohumeral joint and the subscapular bursa. The inferior glenohumeral ligamentous complex is intact. The anterior and posterior labrum are intact. The visualized musculature is normal in signal intensity.

IMPRESSION:

1. ACROMIOCLAVICULAR JOINT HYPERTROPHY IMPINGING UPON THE MYOTENDINOUS JUNCTION.
2. HIGH GRADE PARTIAL TEAR OF THE SYNOVIAL AND BURSAL SURFACES OF THE SUPRASPINATUS TENDON WITH FLUID IN THE GLENOHUMERAL JOINT, SUBACROMIAL/SUBDELTOID BURSA, AND THE SUBSCAPULAR BURSA.
3. INTACT BICEPS ANCHOR COMPLEX. NO FRACTURES OR ACUTE LABRAL TEAR.

Thank you for the courtesy of this referral.
