## FOLLOW-UP NOTE

**CHIEF COMPLAINT:** Follow up of right shoulder and right knee pain.

**HISTORY OF PRESENT ILLNESS:** The patient presents today in followup with continued pain in the right shoulder and right knee.

**ADL CAPABILITIES:** The patient states that he can walk for 1/2 block. He can stand for 5 minutes before he has to sit. He can sit for 5 minutes before needing to change positions secondary to pain. As a direct result of the injuries sustained in this accident, the patient states that he is unable to do the following activities: driving, lifting heavy objects, carrying heavy objects, reaching overhead, laundry, shopping, running errands, kneeling, squatting, negotiating stairs, jogging and exercising.

**PRESENT COMPLAINTS:** Right shoulder: Right shoulder pain is 6-7/10, described as intermittent, sharp, stabbing, dull, achy pain. The patient has weakness, popping, and clicking. The patient is unable to reach overhead, unable to reach behind the back, and unable to sleep at night due to pain.

Right knee: Right knee pain is 6/10, described as intermittent, sharp, stabbing, dull, achy pain. The patient has difficulty rising from a chair and has difficulty going up and down stairs.

**PHYSICAL EXAMINATION:** The right shoulder reveals tenderness to palpation over supraspinatus tendon region and trapezius. There is crepitus appreciated. There is no heat, swelling, erythema or deformity appreciated. Negative drop arm test. Negative cross-over test. Negative empty can test. Negative Yergason test. Negative deltoid atrophy. Positive O'Brien test. Positive impingement sign. Negative Lift-off test. Positive Hawkins test. Range of motion, as per goniometer, abduction 140/180 degrees, adduction 40/45 degrees, forward

flexion 150/180 degrees, extension 50/60 degrees, internal rotation 80/90 degrees, and external rotation 80/90 degrees. Internal rotation to the sacrum. The patient has no motor or sensory deficit of the right upper extremity.

The right knee reveals tenderness along the superior pole of patella. There is crepitus appreciated. There is no heat, swelling, erythema or deformity appreciated. Negative McMurray test. Negative Lachman test. Negative patellofemoral grinding test. Negative anterior drawer. Negative posterior drawer. Range of motion reveals flexion 115/130 degrees and extension 0/5 degrees. Knee is stable with varus and valgus stress test. The patient has no motor or sensory deficit of the right lower extremity.

**DIAGNOSTIC TESTING:** MRI of the right shoulder, done on 08/03/2022, shows partial-thickness undersurface tear of the supraspinatus tendon. Mild fluid in subacromial-subdeltoid bursa compatible with bursitis or may be seen with full thickness rotator cuff tear. AC joint hypertrophy may contribute to rotator cuff impingement. MRI of the right knee, done on 08/03/2022, shows anterior cruciate ligament sprain sequelae. Suprapatellar fat pad impingement.

**ASSESSMENT:**

1. S46.011A Partial rotator cuff tear, right shoulder.
2. M24.811 Internal derangement, right shoulder.
3. M75.01 Adhesive capsulitis, right shoulder.
4. M25.511 Pain, right shoulder.
5. S49.91XA Injury, right shoulder.
6. M25.411 Joint effusion, right shoulder.
7. M23.91 Internal derangement, right knee.
8. M25.461 Joint effusion, right knee.
9. M12.569 Traumatic arthropathy, right knee.
10. S80.911A Injury, right knee.
11. M25.561 Pain, right knee.

**PLAN:**

1. Imaging studies and clinical examinations were reviewed with the patient.
2. All treatment options discussed with the patient.
3. Cold compresses for right shoulder and right knee.
4. Continue anti-inflammatory and muscle relaxant medications p.r.n.
5. Continue physical therapy for right shoulder and right knee 3 days/week.
6. MRI of the right shoulder, done on 08/03/2022, shows partial tear and impingement syndrome. MRI of the right knee, done on 08/03/2022, was nonspecific.
7. Follow up in 4 weeks.

**CAUSALITY:** It is within a certain degree of medical certainty, that the history presented by the patient, the objective physical findings as well as the diagnosis rendered is causally related to the injury the patient incurred on the specified date. These current

symptoms were nonexistent prior to the accident. Findings were discussed with the patient.

**AFFIRMATION:** Being duly licensed to practice medicine in the state of New York, pursuant to the applicable provisions of the Civil Practice Laws and Rules, I hereby affirm under penalty of perjury that the statements contained herein are true and accurate.
