PATIENT: WILLIAMS, TIFFANY
FILE#: 045038
DOB: 07/26/1994
DOS: 08/26/2022
PHYSICIAN: DR. KOPACH, ALEKSANDR

MRI OF THE LEFT KNEE

Clinical History: Pain; s/p injury.

Protocol: T1 and T2 axial and sagittal images

Findings: The anterior and posterior horns of the medial and lateral menisci are normal in configuration. There is no acute medial or lateral meniscal tear. The cartilaginous surfaces in the weight bearing aspects of the knee are well maintained.

There is partial tear of the anterior cruciate ligament with intraarticular joint fluid. The posterior cruciate ligament is normal in position and appearance.

The medial and lateral collateral ligaments are intact. The quadriceps tendon and patellar tendons are normal.

There is a suprapatellar effusion. The medial and lateral patellar facets demonstrate normal cartilaginous thickness and retinacular attachments.

There are no acute femoral, tibial, or fibular fractures. There is no acute osteochondral lesion.

The popliteus tendon is intact. The gastrocnemius muscles are normal in signal intensity.

The popliteal fossa is unremarkable.

IMPRESSION:

1. PARTIAL TEAR OF THE ANTERIOR CRUCIATE LIGAMENT. 2. SUPRAPATELLAR AND INTRAARTICULAR JOINT EFFUSION.

Thank you for the courtesy of this referral.
