PATIENT NAME: DANOWSKY, TIFFANY
PATIENT DOB: 08/15/1984
CHART NUMBER: 045093
EXAM DATE: MAY 25, 2022
REFERRING PHYSICIAN: DR.KOPACH, ALEKSANDR

MRI OF THE LEFT SHOULDER

Clinical History: Pain; s/p injury.

Protocol: T1 and T2 axial and sagittal images

Findings: The acromioclavicular joint is intact. There is joint space narrowing and down sloping acromion process impinging upon the supraspinatus muscle tendon complex.

There is a high grade, almost complete tear of the distal supraspinatus tendon with moderate fluid present in the subacromial/subdeltoid bursa. There is tendinosis and partial tear of the infraspinatus tendon. The subscapularis tendon appears intact.

The humeral head is normal. There is no fracture or bone marrow edema. The long head of the biceps tendon is normally situated in the bicipital groove with surrounded fluid.

Fluid is present in the glenohumeral joint. The anterior and posterior labrum are intact. The inferior glenohumeral ligamentous complex is intact.

The visualized musculature is normal in signal intensity. There is no subcutaneous mass or abnormal fluid collection.

IMPRESSION:

1. TENDINOSIS AND HIGH GRADE PARTIAL TEAR OF THE DISTAL SUPRASPINATUS TENDON NEAR THE ATTACHMENT SITE WITH FLUID IN THE SUBACROMIAL/SUBDELTOID BURSA.
2. ACROMIOCLAVICULAR JOINT NARROWING AND DOWN SLOPING ACROMION PROCESS IMPINGING UPON THE SUPRASPINATUS MUSCLE TENDEON COMPLEX.
3. FLUID PRESENT IN THE GLENOHUMERAL JOINT.

Thank you for the courtesy of this referral.
