## CT EXAM OF THE LEFT SHOULDER WITHOUT CONTRAST

INDICATION: Left shoulder pain.

TECHNIQUE: CT exam of the left shoulder was performed with sequential thin section axial images and with coronal and sagittal reconstructed images, evaluated for bone and soft tissue detail.

COMPARISON: There are no prior exams for comparison.

FINDINGS: The visualized bony structures are intact. There is no fracture or focal bony lesion. The acromioclavicular and glenohumeral joints are maintained. There are no erosive arthritic changes. There is no abnormal soft tissue calcification. There is a normal thickness of the rotator cuff with a normal distance between the humeral head and acromion. No focal soft tissue lesion is seen.

## IMPRESSION:

1. No fracture or focal bony lesion.
2. Intact acromioclavicular and glenohumeral joints.
3. No focal soft tissue abnormality.

Thank you for the courtesy of this consultation.

Stephen Toder, M.D.
