MULTI-POSITION MRI

Accredited by the American College of Radiology

GLORIA CLARKE

N10111580-LB

Report Date: 07/25/2022

DOB: 01/15/1954

Exam Date: 07/22/2022

MICHAEL JURKOWICH MD

243-51 MERRICK BLVD

ROSEDALE, NY 11422

MAGNETIC RESONANCE IMAGING OF THE LEFT KNEE WITHOUT CONTRAST

TECHNIQUE: Multiplanar, multisequential MRI was performed in the 30-degree tilt position.

HISTORY: The patient complains of knee pain.

COMPARISON: None.

INTERPRETATION: Blunting of the free edge of the medial meniscus body compatible with free edge tear. No displacement.

Intact lateral meniscus.

Intact ACL, PCL, and LCL. Chronic MCL sprain.

Intact ITB and biceps femoris. Intact popliteus.

Mild distal quadriceps tendinosis. Intact patellar tendon.

Patella alta with lateral tilting and subluxation of the patella. Please correlate with any symptoms of patellar tracking abnormality.

No full-thickness chondral defect. No bone marrow edema or fracture.

Small knee joint effusion. Slit-like subcentimeter ruptured medial popliteal cyst.

IMPRESSION:

- Blunting of the free edge of the medial meniscus body compatible with free edge tear.
- Chronic MCL sprain.
