PATIENT NAME: TEJADA, KENIA
DATE OF BIRTH: 12/05/1976
MRN #: BR47759
DATE OF SERVICE: 07/15/2022 12:04:24 PM
REFERRING PHYSICIAN: JORDAN FERSEL, MD

MRI EXAM OF THE RIGHT SHOULDER WITHOUT CONTRAST

INDICATION: PAIN.

TECHNIQUE: MRI exam of the right shoulder was performed in sagittal, coronal and axial planes using T1 and T2-weighted sequences.

COMPARISON: There are no prior exams for comparison.

FINDINGS: The right shoulder is intact. There is no fracture. There is prominent osteophyte formation at the acromioclavicular joint.

There is tendinopathy and partial tear of the supraspinatus tendon with increased signal intensity distal portion tendon on T2-weighted sequences and with fluid in the subacromium and subdeltoid bursa. There is tendinopathy and partial tear of the infraspinatus tendon with a focal area of signal void consistent with calcific tendinitis. There is tendinopathy of the subscapularis tendon.

The glenohumeral joint is maintained. The glenoid labrum are intact. There is a joint effusion. There is biceps tendinopathy.

IMPRESSION:

1. Intact right shoulder; osteophyte formation at the acromioclavicular joint.
2. Tendinopathy and partial tear of the supraspinatus tendon and infraspinatus tendon, with probable calcific tendinitis as noted above.
3. Tendinopathy of the subscapularis tendon.
4. Intact glenohumeral joint with effusion.
5. Biceps tendinopathy.

Thank you for the opportunity to participate in the care of this patient.
