POST-OPERATIVE NOTE

The patient is status post arthroscopy of the right shoulder on 09/08/2022 and comes today for postoperative follow-up.

Incisions are clean, dry, and intact and healed. Palpable mass at anterior shoulder 6 cm x 6 cm x 3 cm mobile, tender, and soft mass.

There is no evidence of any drainage, redness, or discharge from the surgical site.

There is no swelling or edema.

There is no wound dehiscence or complications.

The patient is afebrile.

The patient has regained almost full mobility of the shoulder.

The patient has minimal pain.

The patient may start home exercise program.

The patient was advised physical therapy 3 times a week for 4 weeks to regain full mobility of the right shoulder.

CPM and ice machine use x3 daily.

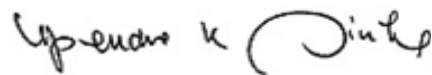

Right sonogram will be done today to rule out lipoma, effusion or mass.

The patient is to return to office in 2 weeks after sonogram.
