PATIENT NAME: PERDOMO, MARIA
DATE OF BIRTH: 04/15/1964
MRN #: BR47946
DATE OF SERVICE: 08/10/2022 07:20:37 PM
REFERRING PHYSICIAN: JORDAN FERSEL, MD

MRI EXAM OF THE RIGHT SHOULDER WITHOUT CONTRAST

INDICATION: Pain. Evaluate for tear.

TECHNIQUE: MRI exam of the right shoulder was performed in sagittal, coronal and axial planes using T1 and T2-weighted sequences.

COMPARISON: There are no prior exams for comparison.

FINDINGS: The right shoulder is intact. There is no fracture. There is osteophyte formation at the acromioclavicular joint.

There is tendinopathy and partial tear of the supraspinatus tendon with increased signal intensity in the distal portion of the tendon on T2-weighted sequences. There is fluid in the subacromium and subdeltoid bursa. There is a partial tear of the subscapularis tendon. The teres minor and infraspinatus tendons are intact.

The glenohumeral joint is maintained. There is irregularity of the articular margins consistent with osteoarthritis. The labrum are intact. There is a joint effusion.

IMPRESSION:

1. No fracture; osteophyte formation at the acromioclavicular joint and osteoarthritis at the glenohumeral joint, as noted above.
2. Tendinopathy and partial tear of the supraspinatus tendon.
3. Partial tear of the subscapularis tendon.
4. Effusion.

Thank you for the opportunity to participate in the care of this patient.
