## FOLLOW-UP NOTE

**CHIEF COMPLAINT:** Follow up of right shoulder pain.

**HISTORY OF PRESENT ILLNESS:** The patient presents today in followup with continued pain in the right shoulder.

**ADL CAPABILITIES:** As a direct result of the injuries sustained in this accident, the patient states that she is unable to do the following activities: driving, lifting heavy objects, carrying, reaching overhead, laundry, shopping, running errands, and exercising.

**PRESENT COMPLAINTS:** Right shoulder: Right shoulder pain is 8/10, described as intermittent, sharp, stabbing, dull, achy pain. The patient has stiffness, popping, and clicking. The patient is able to reach overhead and able to reach behind the back. Worse with range of motion and improves with rest.

**PHYSICAL EXAMINATION:** The right shoulder reveals tenderness to palpation over supraspinatus tendon region, AC joint and proximal biceps tendon. There is crepitus appreciated. There is no heat, swelling, erythema or deformity appreciated. Negative drop arm test. Positive cross-over test. Positive empty can test. Positive Yergason test. Negative deltoid atrophy. Negative O'Brien test. Positive impingement sign. Positive Lift-off test. Positive Hawkins test. Range of motion, as per goniometer, abduction 130/180 degrees, adduction 40/45 degrees, forward flexion 135/180 degrees, extension 45/60 degrees, internal rotation 60/90 degrees, and external rotation 55/90 degrees. Internal rotation to the sacrum. The patient has no motor or sensory deficit of the right upper extremity.

**DIAGNOSTIC TESTING:** MRI of the right shoulder, done on 07/29/2022, shows no fracture or focal bony lesion. Intact acromioclavicular and glenohumeral joints. Tendinopathy and partial tear of the supraspinatus tendon. Effusion.

**ASSESSMENT:**

1. S46.011A Partial rotator cuff tear, right shoulder.
2. M24.811 Internal derangement, right shoulder.
3. M75.81 Shoulder tendinitis, right shoulder.
4. M75.41 Impingement, right shoulder.
5. M25.511 Pain, right shoulder.
6. S49.91XA Injury, right shoulder.
7. M25.411 Joint effusion, right shoulder.

**PLAN:**

1. Imaging studies and clinical examinations were reviewed with the patient.
2. All treatment options discussed with the patient.
3. Cold compresses for right shoulder.
4. Continue anti-inflammatory and muscle relaxant medications p.r.n.
5. Continue physical therapy for 4 weeks for the right shoulder.
6. Recommend steroid injections with pain management for right shoulder. The patient refuses due to side effects.
7. Follow up in 4 weeks.

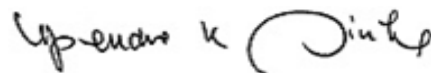

**CAUSALITY:** It is within a certain degree of medical certainty, that the history presented by the patient, the objective physical findings as well as the diagnosis rendered is causally related to the injury the patient incurred on the specified date. These current symptoms were nonexistent prior to the accident. Findings were discussed with the patient.

**AFFIRMATION:** Being duly licensed to practice medicine in the state of New York, pursuant to the applicable provisions of the Civil Practice Laws and Rules, I hereby affirm under penalty of perjury that the statements contained herein are true and accurate.
