PATIENT: CAMPBELL, ANDRE
FILE#: 042513
DOB: 09/19/1995
DOS: 07/22/2022
PHYSICIAN: DR. KOPACH, ALEKSANDR

MRI OF THE RIGHT KNEE

Clinical History: Pain; s/p injury.

Protocol: T1 and T2 axial and sagittal images

Findings: The anterior and posterior horns of the medial and lateral menisci are normal in configuration. There is no acute medial or lateral meniscal tear. The cartilaginous surfaces in the medial and lateral compartments are well maintained.

There is partial tear of the anterior cruciate ligament with intraarticular joint fluid. The posterior cruciate ligament is intact. There is intraarticular joint fluid present. The medial and lateral collateral ligaments are intact. The quadriceps tendon and patellar tendons demonstrate no abnormalities.

Fluid is present in the suprapatellar bursa. The medial and lateral patellar facets demonstrate normal cartilaginous thickness and retinacular attachments.

There are no acute femoral, tibial, or fibular fractures. The popliteus tendon is intact.

The gastrocnemius muscles are normal in signal intensity. The popliteal fossa is unremarkable.

IMPRESSION:

1. PARTIAL TEAR OF THE ANTERIOR CRUCIATE LIGAMENT WITH INTRAARTICULAR JOINT FLUID.
2. SUPRAPATELLAR EFFUSION.
3. NO ACUTE FRACTURE OR MENISCAL TEAR.

Thank you for the courtesy of this referral.
