LEFT HINDFOOT MRI WITHOUT CONTRAST

HISTORY: Left hindfoot pain status post motor vehicle accident

TECHNIQUE: Multiplanar, multi-sequence MRI of the left hindfoot was performed without intravenous contrast.

COMPARISON: None available.

FINDINGS:

LIGAMENTS: The anterior talofibular, posterior talofibular, and calcaneofibular ligaments are intact. The deltoid ligament complex is intact. The Lisfranc ligament complex is preserved.

TENDONS: There is tendinitis of the inframalleolar peroneus brevis tendon. The remainder of the tendons about the ankle are intact.

MUSCLES: There is no intramuscular edema or fatty muscle atrophy.

PLANTAR FASCIA: Intact.

CARTILAGE/SUBCHONDRAL BONE: The cartilage of the tibiotalar, subtalar, talonavicular, and calcaneocuboid joints is intact.

SYNOVIUM/JOINT FLUID: No synovial thickening or joint effusion.

OSSEOUS STRUCTURES: No fractures or osteonecrosis.

SINUS TARSI: Normal.

NEUROVASCULAR STRUCTURES: Normal in course and caliber.

PERIPHERAL SOFT TISSUES: Normal.

IMPRESSION:

Tendinitis of the inframalleolar peroneus brevis tendon.
