Dear Dr. Barakat:

MRI OF THE RIGHT KNEE

TECHNIQUE: Coronal PD weighted and T2 weighted fast spin-echo images were obtained. Axial PD weighted fast spin-echo images were obtained. Sagittal PD weighted fast spin-echo and fat suppressed T2 weighted fast spin-echo images were obtained.

FINDINGS: Medial and lateral compartments are intact. Articular cartilage is maintained. There is a patella alta with lateral tilt and subluxation. Patellar and trochlear cartilage are preserved. A capsular effusion is present. There is a Baker's cyst of 2.3 cm in craniocaudal dimension

Evaluation of meniscal fibrocartilages reveals grade I signal in the posterior horn of the medial meniscus. There is an oblique undersurface tear of the anterior horn. The lateral meniscus is intact. There is anterior cruciate ligament scarring. The posterior cruciate ligament is preserved. There is medial collateral ligament scarring. The lateral collateral ligament is intact. There are medial and lateral retinacular sprains. Posterolateral corner structures including the popliteus tendon are intact. The iliotibial tract and extensor tendons are preserved.

IMPRESSION:

1. Tear of the anterior horn of the medial meniscus.
2. Anterior cruciate ligament scarring.
3. Medial collateral ligament scarring.

Patient#: 301970

MRI OF THE RIGHT KNEE

- 4. Medial and lateral retinacular sprains.
- 5. Joint effusion with Baker's cyst.
- 6. Patella alta with lateral tilt and subluxation.

Thank you for the courtesy of this referral.

Sincerely,

David R. Payne, M.D.
