PATIENT NAME: CALDERON, MARIA  
DATE OF BIRTH: 10/20/1942  
MRN #: BR48338  
DATE OF SERVICE: 09/25/2022 09:25:06 AM  
REFERRING PHYSICIAN: COLIN CLARKE, MD

**MRI EXAM OF THE RIGHT SHOULDER WITHOUT CONTRAST**

**INDICATION:** PAIN.

**TECHNIQUE:** MRI exam of the right shoulder was performed in sagittal, coronal and axial planes using T1 and T2-weighted sequences.

**COMPARISON:** There are no prior exams for comparison.

**FINDINGS:** The right shoulder is intact. There is no fracture. There is superior and inferior osteophyte formation at the acromioclavicular joint.

There is a complete tear of the supraspinatus tendon with retraction of the tendon to the level the acromion. There is a decreased distance between the humeral head and acromion with prominent fluid in the subacromium and subdeltoid bursa as well as a joint effusion. There is tendinopathy and tear of the infraspinatus tendon. There is tendinopathy of the subscapularis tendon.

The glenohumeral joint is maintained. The glenoid labrum are intact. There is a joint effusion. Additional fluid collection anterior to the supraspinatus tendon shows a normal contour measuring 2 cm and is consistent with a ganglion cyst. There is biceps tendinopathy.

**IMPRESSION:**

1. Intact right shoulder; osteophytes at the acromioclavicular joint.
2. Tear and retraction the supraspinatus tendon.
3. Tendinopathy and tear of the infraspinatus tendon.
4. Tendinopathy of the subscapularis tendon.
5. Intact right humeral joint.
6. Effusion and additional anterior fluid collection consistent with ganglion cyst.
7. Biceps tendinopathy.

Thank you for the opportunity to participate in the care of this patient.
