PATIENT NAME: DIALLO, AISSATOU  
PATIENT DOB: 06/23/1970  
CHART NUMBER: 044956  
EXAM DATE: APRIL 26, 2022  
REFERRING PHYSICIAN: DR.KOPACH, ALEKSANDR

**MRI OF THE LEFT SHOULDER**

**Clinical History:** Pain; s/p injury.

**Protocol:** T1 and T2 axial and sagittal images

**Findings:** There is widening of the acromioclavicular joint. There is no fracture or edema of the distal clavicle. There is bony hypertrophy, which may be impinging upon the supraspinatus muscle tendon complex.

There is tendinosis and partial tear of the bursal surface of the distal supraspinatus tendon. The infraspinatus tendon is intact. The subscapularis tendon is intact. There is fluid present in the subacromial/subdeltoid bursa.

The humerus is normal. There is no fracture or bone marrow edema. The long head of the biceps tendon is normally situated in the bicipital groove.

The anterior and posterior labrum are intact. The inferior glenohumeral ligamentous complex is intact. The visualized musculature is normal in signal intensity. There is no subcutaneous mass or abnormal fluid collection.

**IMPRESSION:**

1. WIDENING OF THE ACROMIOCLAVICULAR JOINT WITH UNDERSURFACE HYPERTROPHY WHICH MAY BE CAUSING IMPINGEMENT.
2. TENDINOSIS AND PARTIAL TEAR OF THE BURSAL SURFACE OF THE DISTAL SUPRASPINATUS WITH FLUID PRESENT IN THE SUBACROMIAL/SUBDELTOID BURSA.

Thank you for the courtesy of this referral.
