## INITIAL ORTHOPEDIC CONSULT EXAMINATION

**CHIEF COMPLAINT:** Right shoulder and right knee pain.

**HISTORY OF PRESENT ILLNESS:** A 55-year-old right-hand dominant male involved in a motor vehicle accident on 02/13/2022. The patient was a driver and was wearing a seatbelt. The vehicle was struck on the rear end. The airbags did not deploy. The EMS did not arrive on the scene. The police were not called to the scene of the accident. The patient did not go to any hospital that same day. The patient presents today complaining of right shoulder and right knee pain sustained in the motor vehicle accident. The patient was attending physical therapy for the last 8 months with little relief.

**WORK HISTORY:** The patient is currently not working.

**PAST MEDICAL HISTORY:** Hyperlipidemia. There is a previous history of trauma, MVA in 2021.

**PAST SURGICAL HISTORY:** Cholecystectomy in 1998 and right shoulder surgery in 2021.

**DRUG ALLERGIES:** NO KNOWN DRUG ALLERGIES.

**MEDICATIONS:** Unable to recall.

**SOCIAL HISTORY:** The patient is a nonsmoker. The patient does not drink alcohol. The patient does not use recreational drugs.

**ADL CAPABILITIES:** The patient states that he can walk for 1/2 block. He can stand for 5 minutes before he has to sit. He can sit for 5 minutes before needing to change positions secondary to pain. As a direct result of the injuries sustained in this accident, the patient states that he is unable to do the following activities: driving, lifting heavy objects, carrying heavy objects, reaching overhead, laundry, shopping, running errands, kneeling, squatting, negotiating stairs, jogging and exercising.

**PRESENT COMPLAINTS:** Right shoulder: Right shoulder pain is 6/10, described as intermittent, sharp, stabbing, dull, achy pain. The patient has stiffness, weakness, popping, and clicking. The patient is able to reach overhead and able to reach behind the back, but is unable to sleep at night due to pain. Worse with range of motion and improves with physical therapy.

Right knee: Right knee pain is 7/10, described as intermittent, sharp, stabbing, dull, achy pain. The patient has stiffness and weakness. The patient has difficulty rising from a chair and has difficulty going up and down stairs. The patient also notes clicking, popping, buckling, and intermittent locking. Worse with range of motion and improves with rest and physical therapy.

**REVIEW OF SYSTEMS:** Temperature taken at the time of exam was 98.6 degrees Fahrenheit.

**General:** No fever, chills, night sweats, weight gain, or weight loss.

**HEENT:** No double vision, eye pain, eye redness, decreased hearing, earache, ear ringing, nosebleeds, sore throat or hoarseness.

**Endocrine:** No cold intolerance, appetite changes or hair changes.

**Skin:** Clear, no rashes or lesions.

**Neuro:** No headaches, dizziness, vertigo or tremor.

**Respiratory:** No wheezing, coughing, shortness of breath or difficulty breathing.

**Cardiovascular:** No chest pain, murmurs, irregular heart rate or hypertension. The patient has hyperlipidemia.

**GI:** No nausea, vomiting, diarrhea, constipation, jaundice or changes in bowel habits.

**GU:** No blood in urine, painful urination, loss of bladder control or urinary retention.

**Hematology:** No active bleeding, bruising, anemia or blood clotting disorders.

**Psychiatric:** No anxiety, change in sleep pattern, depression or suicidal thoughts.

**PHYSICAL EXAMINATION:** The patient's height is 5 feet 9 inches, weight is 175 pounds, and BMI is 25.8. The right shoulder reveals tenderness to palpation over supraspinatus tendon region. There is crepitus appreciated. There is no heat, swelling, erythema or deformity appreciated. Negative drop arm test. Positive cross-over test. Positive empty can test. Positive Yergason test. Negative deltoid atrophy. Negative O'Brien test. Positive impingement sign. Positive Lift-off test. Positive Hawkins test. Range of motion, as per goniometer, abduction 115/180 degrees, adduction 35/45 degrees, forward flexion 130/180 degrees, extension 45/60 degrees, internal rotation 45/90 degrees, and external rotation 60/90 degrees. Internal rotation to the sacrum. The patient has no motor or sensory deficit of the right upper extremity.

The right knee reveals tenderness along the medial joint line. There is crepitus appreciated. There is no heat, swelling, erythema or deformity appreciated. Positive McMurray test.

Negative Lachman test. Positive patellofemoral grinding test. Negative anterior drawer. Negative posterior drawer. Range of motion reveals flexion 95/130 degrees and extension 4/5 degrees. Knee is stable with varus and valgus stress test. The patient has no motor or sensory deficit of the right lower extremity.

**DIAGNOSTIC TESTING:** MRI of the right shoulder, done on 04/07/2022, shows prior surgery for rotator cuff tear with metallic screws in the greater tuberosity of humerus; osteophytes at the acromioclavicular joint. Tendinopathy of the supraspinatus tendon; no evidence of retraction. Tendinopathy of the infraspinatus, teres minor and subscapularis tendons as noted above. Irregularity of the articular margins of the glenohumeral joint without labral tear; joint effusion. MRI of the right knee, done on 07/11/2022, shows medial meniscal tear as discussed above. Small joint effusion with a few small popliteal cysts noted, especially medially. Remaining findings as discussed above.

**ASSESSMENT:**

1. M24.811 Internal derangement, right shoulder.
2. M75.81 Shoulder tendinitis, right shoulder.
3. M75.41 Impingement, right shoulder.
4. M25.511 Pain, right shoulder.
5. S49.91XA Injury, right shoulder.
6. M25.411 Joint effusion, right shoulder.
7. S83.241A Medial meniscus tear, right knee.
8. M23.91 Internal derangement, right knee.
9. M25.461 Joint effusion, right knee.
10. S80.911A Injury, right knee.
11. M25.561 Pain, right knee.

**PLAN:**

1. Imaging studies and clinical examinations were reviewed with the patient.
2. All treatment options discussed with the patient.
3. Cold compresses for right shoulder and right knee.
4. Continue anti-inflammatory and muscle relaxant medications p.r.n.
5. Continue physical therapy for right shoulder and right knee 3 days/week.
6. Recommend steroid injections with pain management for right shoulder and right knee. The patient refuses due to side effects.
7. Discussed right shoulder and right knee arthroscopy versus conservative management with the patient. The patient states that due to continual pain and lack of relief with physical therapy and the inability to perform day-to-day activities due to pain, the patient wants to think about surgery.
8. It is medically necessary to perform the suggested surgery to properly diagnose the patient's condition and to objectively verify presence and severity of internal derangement and other right shoulder and right knee pathology in quantitative and qualitative terms and achieve better prognosis. This surgery is crucial to provide most specific and maximally effective treatment to this patient.

9. Discussed the length of the arthroscopy, the postoperative instructions, and the option of continuing with conservative management alternatives to surgery, including no surgery.
10. All the benefits and risks of the right shoulder and right knee arthroscopy have been discussed with the patient. The risks include, but not limited to bleeding, infection, pain, stiffness, muscle injury, nerve injury, DVT, and recurrence.
11. All the questions in regard to the procedure were answered.
12. Follow up in 2 weeks for decision.

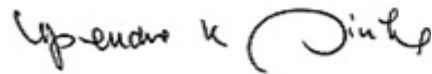

**CAUSALITY:** It is within a certain degree of medical certainty, that the history presented by the patient, the objective physical findings as well as the diagnosis rendered is causally related to the injury the patient incurred on the specified date. These current symptoms were nonexistent prior to the accident. Findings were discussed with the patient.

**AFFIRMATION:** Being duly licensed to practice medicine in the state of New York, pursuant to the applicable provisions of the Civil Practice Laws and Rules, I hereby affirm under penalty of perjury that the statements contained herein are true and accurate.
