PATIENT:	CASON, JALEN	EXAM DATE:	05/06/2022 6:15 PM
STUDY DESCRIPTION:	MRI SHOULDER WITHOUT CONTRAST	MRN:	CASJ65267
DOB:	08/04/1993	REFERRING PHYSICIAN:	Qureshi, Adnan
CLINICAL HISTORY	C/O LT SHOULDER PAIN DUE TO MVA	GENDER	M

MAGNETIC RESONANCE IMAGING OF LEFT SHOULDER WITHOUT CONTRAST

HISTORY: Complains of left shoulder pain due to motor vehicle accident.

TECHNIQUE: Multiplanar, multi-sequence MRI of the left shoulder was performed without intravenous contrast.

COMPARISON: None available.

OSSEOUS STRUCTURES/MARROW: Normal marrow signal.

ROTATOR CUFF:

SUPRASPINATUS: There is a partial-thickness bursal surface tear of the supraspinatus tendon.

INFRASPINATUS: The infraspinatus tendon maintains intact tendon fibers. No tendon retraction is found. No skeletal muscle atrophy is seen.

TERES MINOR: The teres minor tendon maintains intact tendon fibers. No tendon retraction is found. No skeletal muscle atrophy is seen.

SUBSCAPULARIS: The subscapularis tendon maintains intact tendon fibers. No tendon retraction is found. No skeletal muscle atrophy is seen.

SUBACROMIAL/SUBDELTOID BURSA: No fluid in subacromial-subdeltoid bursa to suggest bursitis.

MUSCLES: No muscle edema or fatty muscle atrophy.

AC JOINT: AC joint hypertrophy may contribute to rotator cuff impingement.

BICEPS TENDON: There is tenosynovitis of the extra articular long head of the biceps tendon.

LABRUM/LIGAMENTS: No labral tear or ligament abnormalities.

CLINICAL HISTORY	C/O LT SHOULDER PAIN DUE TO MVA	GENDER	M

CORACOACROMIAL LIGAMENT/ROTATOR INTERVAL: Rotator interval is normal.

GLENOHUMERAL CARTILAGE: Intact articular cartilage.

SYNOVIUM/JOINT FLUID: No joint effusion or synovial thickening.

NEUROVASCULAR STRUCTURES: Normal in course and caliber.

PERIPHERAL SOFT TISSUES: Normal.

IMPRESSION:

1. Partial-thickness bursal surface tear of the supraspinatus tendon.
2. Tenosynovitis of the extra articular long head of the biceps tendon.
3. AC joint hypertrophy may contribute to rotator cuff impingement.
