PATIENT NAME: BRIGHT, ANTWI
DATE OF BIRTH: 08/25/1978
MRN #: BR48250
DATE OF SERVICE: 09/22/2022 04:28:25 PM
REFERRING PHYSICIAN: COLIN CLARKE, MD

MRI EXAM OF THE LEFT KNEE WITHOUT CONTRAST

INDICATION: NF. Left knee pain.

TECHNIQUE: MRI exam of the left knee was performed in sagittal, coronal and axial planes using T1 and T2-weighted sequences.

COMPARISON: There are no prior exams for comparison.

FINDINGS: The left knee is intact without fracture. There is bone bruise involving the distal femur and patella; there is irregularity of the articular margins the patellofemoral joint with narrowing of the joint space, consistent with chondromalacia patella. There is a small benign bone cyst in the posterior aspect of the proximal tibia measuring 5 x 8 mm..

There is a nondisplaced tear of the posterior horn of the medial meniscus. The lateral meniscus is intact. The anterior and posterior cruciate ligaments are maintained. There is strain of the medial collateral ligament. The lateral collateral ligament is intact.

There is strain of the patellar tendon. The quadriceps tendon is intact. There is a knee effusion. There is prepatellar bursitis.

IMPRESSION:

1. Chondromalacia patella with the left knee with associated bone bruises in the distal femur and patella.
2. Effusion.
3. Nondisplaced tear of the posterior horn of the medial meniscus.
4. Strain of the medial collateral ligament.
5. Prepatellar bursitis.

Thank you for the opportunity to participate in the care of this patient.
