PATIENT NAME: CHOWDHURY A, BADRUL
DATE OF BIRTH: 05/13/1967
MRN #: BR48251
DATE OF SERVICE: 09/23/2022 07:54:34 PM
REFERRING PHYSICIAN: COLIN CLARKE, MD

MRI EXAM OF THE LEFT SHOULDER WITHOUT CONTRAST

INDICATION: NF. Left shoulder pain.

TECHNIQUE: MRI exam of the left shoulder was performed in sagittal, coronal and axial planes using T1 and T2-weighted sequences.

COMPARISON: There are no prior exams for comparison.

FINDINGS: The left shoulder is intact without fracture. There is subchondral cyst formation the greater tuberosity of humerus. There are osteophytes at the acromioclavicular joint.

There is tendinopathy and partial tear of the supraspinatus tendon with increased signal intensity in the distal portion of the tendon on T2-weighted sequences. The infraspinatus, subscapularis and teres minor tendons are intact.

The glenohumeral joint is maintained. The glenoid labrum are preserved.

IMPRESSION:

1. No fracture or focal bony lesion; osteophytes at the acromioclavicular joint.
2. Tendinopathy and partial tear of the supraspinatus tendon.
3. No additional focal soft tissue abnormality.
4. Intact glenohumeral joint and glenoid labrum.

Thank you for the opportunity to participate in the care of this patient.
