DENNY X. RODRIGUEZ, M.D.
4720 AVENUE N
BROOKLYN, NY 11234

PATIENT: GARRI JAFAROV
DOB: 09/12/1978 DOS: 08/09/2022 CHART #: 4225
EXAM: MRI OF THE LEFT SHOULDER WITHOUT CONTRAST

HISTORY: Shoulder pain, limited range of motion.

TECHNIQUE: Multiplanar MR imaging of the left shoulder was performed without contrast on Hitachi open MRI unit.

Coronal T1, T2 and STIR; Sagittal T2; Axial PD and gradient echo images of the shoulder were obtained.

COMPARISON: None.

FINDINGS: There is no bone marrow edema, bony lesion or fracture identified.

The acromioclavicular and glenohumeral joints are preserved.

There is increased signal in the distal aspect of the infraspinatus tendon along the articular surface suggesting a low-grade partial non-retracted tear.

Fluid is noted surrounding the long head of the biceps tendon suggesting tenosynovitis.

The supraspinatus and subscapularis tendons are normal in signal and appearance.

The glenoid labrum and rotator cuff interval demonstrate no abnormality.

The rotator cuff muscles are normal in signal.

There is fluid in the subcoracoid bursa.

IMPRESSION:

1. PARTIAL TEAR OF THE DISTAL ASPECT OF THE INFRASPINATUS TENDON ALONG THE ARTICULAR SURFACE.
2. TENOSYNOVITIS OF THE LONG HEAD OF THE BICEPS TENDON.

Handwritten signature: JAFAROV
