Name: **MIA WASHINGTON**

Date of Birth: Oct 04, 1994

Referring Physician: SCOTT LYONS PA

Accession/MRN: / 69

Date of Service: Jun 21, 2022 14:30:15

Approval Date: Jun 24, 2022 13:26:00

### Description: MRI LEFT ANKLE WO

#### MRI OF THE LEFT ANKLE:

**Protocol:** T1, T2 FSE with fat/sat; T1; 3D SG coronal; T1 SG sagittal

**Clinical history:** Pain, s/p injury

**Findings:** The anterior inferior tibiofibular ligament is intact. There is a sprain or partial tear of the anterior talofibular ligament. The posterior ankle ligaments are intact.

There is a partial tear or tendinosis of the peroneus brevis tendon at the level of the malleolar fossa. There is tenosynovitis of the medial flexor tendons.

The deltoid ligament and the calcaneofibular ligaments are intact. The talocalcaneal ligaments are grossly intact. There is normal signal in the distal fibula and the lateral malleolus. The medial malleolus is normal.

There is no talar dome fracture. There is normal cartilaginous surface at the tibiotalar articulation.

There is no calcaneal stress fracture or lytic lesion. A normal Achilles tendon is present inserting into the posterior calcaneus. The plantar fascia is intact. There are no soft tissue masses.

**IMPRESSION:**

1. PARTIAL TEAR OF ANTERIOR TALOFIBULAR LIGAMENT WITH MODERATE SIZED ANKLE JOINT EFFUSION.
2. PARTIAL TEAR OF THE PERONEUS BREVIS TENDON AT THE LEVEL OF THE MALLEOLAR FOSSA.
3. NO ACUTE FRACTURES OR OSTEOCHONDRAL LESION.
