PATIENT:	TUCKER, LECIA	EXAM DATE:	15-Oct-2022 4:10 PM
STUDY DESCRIPTION:	MRI HAND WITHOUT CONTRAST LT	MRN:	TUCL1046
DOB:	03-Sep-1975	REFERRING PHYSICIAN:	Jurkovich, Michael M.D.
CLINICAL HISTORY:	car accident It hand pain	GENDER:	F

LEFT MRI HAND WITHOUT CONTRAST

HISTORY: car accident
It hand pain

TECHNIQUE: Multiplanar multisequence MRI of the left hand was performed without intravenous contrast.

COMPARISON: none.
FINDINGS:

Bony structures—bone marrow: There is bone marrow edema of the first carpometacarpal and first metacarpal phalangeal joint. There is slight subluxation of the first metatarsal phalangeal articulation. There is no abnormal bone marrow signal.

Synovial/joints: There is no synovial hypertrophy of joint effusion

Ligaments: There is increased signal along the radial aspect of the radial collateral ligament of the first metacarpal phalangeal joint representing a sprain from underlying trauma. The remainder the visualized ligaments are normal.

Muscles: No muscle edema fatty atrophy

Tendons: Tendons fibers are intact and in alignment with no tears

Soft tissues: Soft tissue edema along the first digit.
