PERVAIZ QURESHI, M.D.  
79-09 B NORTHERN BLVD  
JACKSON HEIGHTS, NY 11372

PATIENT: MANUEL GREGORIO BATISTA  
DOB: 05/19/1981  
DOS: 04/08/2022  
CHART #: 24831  
EXAM: MRI OF THE RIGHT KNEE WITHOUT CONTRAST

HISTORY: Pain.

TECHNIQUE: Multiplanar MR imaging of the right knee was performed without contrast on Hitachi open MRI unit.

Coronal PD, T2 and STIR; Sagittal PD and PD fat suppressed; axial T2 and T2 fat suppressed of the knee were obtained.

COMPARISON: None.

Additional sanitizing / safety protocols recommended by the CDC were performed.

FINDINGS: There is a moderate lateral patellar tilt.

There is no chondromalacia.

A focal contusion is seen overlying the patellar tendon. There are mild tendinopathy changes at the patellar tendon. The quadriceps tendon is intact.

There is no fracture. There is no bone bruise. Small cysts are seen adjacent to the tibial spine.

The PCL is unremarkable. There is diffuse disorganization and poor margination seen at the ACL. A moderate interstitial tear is noted.

The medial meniscus is intact. A horizontal tear is seen at the lateral meniscus from the anterior body to the posterior horn exiting superiorly. There is slight attenuation of the anterior body and anterior horn of the lateral meniscus.

Mild contusions are seen overlying the medial and lateral retinacula.

EXAM: MRI OF THE RIGHT KNEE WITHOUT CONTRAST

PAGE 2

### IMPRESSION:

1. AN INTERSTITIAL TEAR OF THE ACL IS NOTED, AS DESCRIBED, WHICH IS GREATER PROXIMALLY. SURROUNDING REACTIVE CHANGES ARE SEEN.
2. THERE IS A CONTUSION OVER THE PATELLAR TENDON AND EXTENDING MEDIALY AND LATERALLY.
3. A HORIZONTAL TEAR IS SEEN AT THE LATERAL MENISCUS FROM THE ANTERIOR BODY TO THE POSTERIOR HORN. THERE IS SLIGHT INVOLVEMENT OF THE ANTERIOR HORN WITH ATTENUATION.

Thank you for referring this patient to us.
