PATIENT: FERREIRA WILLIAM  
DOB: 12/13/1999  
PHYSICIAN: DR. SIKEND  
EXAM DATE: 12/23/2021

**MRI OF THE RIGHT KNEE**

**INDICATION:** Pain.

**TECHNIQUE:** Multiple T1 and T2 weighted MRI images of the right knee were obtained in the axial, sagittal and coronal planes without intravenous contrast.

**FINDINGS:** There are no acute fractures, dislocations, destructive bony lesions or marrow infiltration in the distal femur, proximal tibia, fibula and the patella. The patellar retinacula are intact. The distal quadriceps tendon, the patellar tendon, the lateral collateral, the fibular collateral ligaments and the iliotibial band are intact. The ACL and the PCL are intact. The lateral meniscus is intact. There are no masses or fluid collections. The adjacent musculature is intact without strains, edema, atrophy or fatty infiltration.

Mild joint effusion consistent with recent trauma or synovitis, in an appropriate clinical setting. There is horizontal tear in the posterior horn of the medial meniscus.

**IMPRESSION:**

1. Horizontal tear in the posterior horn of the medial meniscus.
2. Mild joint effusion consistent with recent trauma or synovitis, in an appropriate clinical setting.
