PATIENT NAME: Lorge, Kathelene  
DATE OF BIRTH: 10/15/92  
REFERRING PHYSICIAN: Dr. Cynthia Robinson  
DATE OF EXAM: 7/22/22

**MRI OF THE RIGHT WRIST:**

**TECHNIQUE:** Sagittal and coronal images of the right wrist were obtained using spin-echo pulse sequences.

**CLINICAL HISTORY:** Pain.

**FINDINGS:** The triangular fibrocartilage complex is intact. There is a negative ulnar variance. There is narrowing of the intercarpus, first radiocarpal and intercarpal joints. There are scattered erosions. There is capsular thickening.

Carpal bone alignment is within normal limits.

Marrow signal, cortical bone and articular cartilages are unrevealing.

No fracture or dislocation is seen.

The common flexor tendons are large with outwardly bowed transverse carpal ligament suggestive of carpal tunnel syndrome.

All visualized tendons and ligaments and neurovascular structures are unrevealing.

The soft tissue structures about the wrist were within normal limits.

**IMPRESSION:**

1. Carpal tunnel syndrome.
2. Negative ulnar variance.
3. Narrowing of the intercarpus, first radiocarpal and intercarpal joints.
4. Scattered erosions.
5. Capsular thickening.

Thank you for the courtesy of this consultation.
