MULTI-POSITION MRI

Accredited by the American College of Radiology

EBONY YOUNG**N10116595-QU****Report Date: 08/25/2022****DOB: 08/11/1985****Exam Date: 08/25/2022****MOHAMMAD HASANUZZAMAN MD****219-49 JAMAICA AVENUE****QUEENS VILLAGE, NY 11428****MAGNETIC RESONANCE IMAGING OF THE LEFT WRIST**

TECHNIQUE: Multiplanar, multisequential MRI was performed in the recumbent position on a high-field 1.5 Tesla magnet.

HISTORY: Patient complains of left wrist pain.

INTERPRETATION:

Extensor tendons are intact. No subluxation. Peritendinous edema of extensor carpi ulnaris.

Carpal tunnel is intact. Neurovascular bundles are intact.

No fracture of the radius. No fracture of the ulna.

Undersurface partial tear of the ulnar and central TFC. Radial TFC is intact. Joint effusion.

LT ligament is intact. SL ligament is intact.

No carpal bone fracture. No erosion or dislocation.

Volar extrinsic ligament sprain. Dorsal extrinsic ligament sprain.

No muscle tear. No soft tissue lesion.

IMPRESSION:

- Proximal partial ulna and central TFC tear.
- Extrinsic ligament sprains.
