PATIENT NAME: ZYLLA, MARK
PATIENT DOB: ~~11/30/1986~~ 10/30/1986
CHART NUMBER: 045478
EXAM DATE: AUGUST 03, 2022
REFERRING PHYSICIAN: DR.KOPACH, ALEKSANDR

MRI OF THE LEFT KNEE

Protocol: T1, T2 axial and sagittal sequences

Clinical history: Knee pain, s/p injury

Findings: The anterior and the posterior horns of the medial and the lateral menisci are normal in appearance from notch to periphery. There is linear signal in the posterior horn of the medial meniscus not involving the articular cartilaginous surface.

There is a partial tear of the anterior cruciate ligament with intra-articular joint fluid. The posterior cruciate ligament is normal in position and appearance.

The medial and the lateral collateral ligaments are intact. The quadriceps tendon and the patellar tendons are normal.

There is fluid in the suprapatellar bursa. The medial and the lateral patellar facets demonstrate normal cartilaginous thickness and retinacular attachments.

There is no acute femoral, tibial, or fibular fracture. There is no acute osteochondral lesion.

The popliteus tendon is intact. The gastrocnemius muscles are normal in signal intensity.

The popliteal fossa is unremarkable.

IMPRESSION:

1. PARTIAL TEAR OF THE ANTERIOR CRUCIATE LIGAMENT WITH INTRA-ARTICULAR JOINT EFFUSION.
2. SUPRAPATELLAR EFFUSION.
3. LINEAR SIGNAL PRESENT IN THE POSTERIOR HORN OF THE MEDIAL MENISCUS.

Thank you for the courtesy of this referral.
