PATIENT: OZUNA, FLOR
FILE#: 042399
DOB: 10/11/1989
DOS: 06/30/2022
PHYSICIAN: DR. CLARKE, COLIN

MRI OF THE RIGHT KNEE:

Protocol: T1, T2 axial and sagittal sequences

Clinical history: Pain, s/p injury

Findings: The anterior and the posterior horns of the medial and lateral menisci are normal in configuration. There is no acute medial or lateral meniscal tear. The cartilaginous surfaces in the weight bearing aspects of the knee are well maintained.

There is a partial tear of the anterior cruciate ligament with intra-articular joint effusion. The posterior cruciate ligament is normal in position and appearance.

The medial and the lateral collateral ligaments are intact. The quadriceps tendon and the patellar tendons are normal.

There is lateral tracking of the patella and suprapatellar effusion. The medial and lateral patellar facets demonstrate normal cartilaginous thickness and retinacular attachments.

There is no acute femoral, tibial, or fibular fracture or bone marrow edema. There is mild signal abnormality in the posterior aspect of the lateral tibial plateau and the adjacent fibular head.

The popliteus tendon is intact. The gastrocnemius muscles are normal in signal intensity.

The popliteal fossa is unremarkable.

IMPRESSION:

1. PARTIAL TEAR OF THE ANTERIOR CRUCIATE LIGAMENT WITH INTRA-ARTICULAR JOINT EFFUSION.
2. SUPRAPATELLAR EFFUSION.
3. SIGNAL ABNORMALITY PRESENT IN THE SUPERIOR LATERAL TIBIA AND THE FIBULAR HEAD LIKELY POST-TRAUMATIC EDEMA.

Thank you for the courtesy of this referral.
