Patient: HERNANDEZ DESIREE

Exam Date: 02-11-2022

MRN: 267945/1

DOB: 08-18-1967

Referring Physician: SALICK RAVI, MD

Fax Number: 1718-275-6381

Procedure Description: MRI SHOULDER LEFT
WITHOUT CONTRAST

MRI OF THE LEFT SHOULDER

Clinical History: Shoulder pain

Protocol: T1, T2, GRE images in coronal, axial, and sagittal projections.

Findings: The acromioclavicular joint is intact without arthrosis or edema of the distal clavicle.

The supraspinatus, infraspinatus, and subscapularis tendons are intact. A partial tear of the bursal surface of the distal supraspinatus tendon is present near the attachment site, with fluid in the glenohumeral joint and the subacromial-subdeltoid bursa.

There is an intact biceps labral complex.

A normal inferior glenohumeral ligament complex is noted.

The anterior and inferior labrum are intact. The posterior labrum is normal.

There is an intact biceps tendon in the bicipital groove.

The glenoid fossa is normal. There is no sclerosis or signal abnormality in the glenoid.

There is a normal coracohumeral ligament/superior glenohumeral ligament complex.

IMPRESSION:

1. TENDINOSIS AND PARTIAL TEAR OF THE BURSA SURFACE OF THE DISTAL SUPRASPINATUS TENDON WITH FLUID PRESENT IN THE GLENOHUMERAL JOINT AND THE SUBACROMIAL-SUBDELTOID BURSA.
2. INTACT ACROMIOCLAVICULAR JOINT WITHOUT ARTHROSIS OR HYPERTROPHY.
3. INTACT BICEPS LABRAL COMPLEX AND INFERIOR GLENOHUMERAL LIGAMENOUS COMPLEX.
