PATIENT NAME:

ORTIZ, LARRY

DATE OF BIRTH:

10/19/1996

MRN #:

BR47381

DATE OF SERVICE: REFERRING PHYSICIAN: 06/22/2022 04:13:23 PM JORDAN FERSEL, MD

MRI EXAM OF THE RIGHT ANKLE WITHOUT CONTRAST

INDICATION: Right ankle pain.

TECHNIQUE: MRI exam of the right ankle was performed in sagittal, axial and coronal planes using T1 and T2 weighted sequences.

COMPARISON: There are no prior exams for comparison.

FINDINGS: The right ankle is intact. There is no fracture. There is avascular necrosis involving the lateral aspect of the dome of the talus, with focal areas of increased signal intensity on T2 weighted sequences and irregularity of the articular margin, with associated bone bruise. The ankle joint is otherwise maintained. The subtalar and talonavicular joints are maintained.

The Achilles tendon is intact. There is tendinopathy of the posterior tibial tendon and flexor digitorum longus tendon. The lateral and anterior ankle tendons are intact.

There is tendinopathy and partial tears of the anterior and posterior talonavicular ligaments. The collateral ligaments are maintained.

IMPRESSION:

- 1. No fracture; bone bruise in the talus, with avascular necrosis of the lateral aspect of the talar dome.
- 2. Intact subtalar and talonavicular joints.
- 3. Tendinopathy of the posterior tibial tendon and flexor digitorum longus tendon.
- 4. Tendinopathy and partial tears of the anterior and posterior talonavicular ligaments.

Thank you for the opportunity to participate in the care of this patient.
