## SKY RADIOLOGY

PATIENT NAME

KUMAR, KEVINASH

D.O.B.

02/25/1998

PATIENT #

134

DATE OF SERVICE

5/25/2022 10:30:28 AM

REF. PHYSICIAN

RAHMAN, QUAZI MD

## MRI OF THE LEFT SHOULDER WITHOUT CONTRAST

INDICATION: Pain

COMPARISON: No prior study was available for comparison at the time of dictation.

TECHNIQUE: T1, T2, and PD, axial, coronal, and sagittal sequences were obtained.

## FINDINGS:

No fracture. Bone marrow signal is normal. Glenohumeral cartilage is intact.

No os acromiale. AC joint arthrosis with a small effusion. Lateral downsloping acromion which may be causing impingement.

Tendinopathy and thickening of the supraspinatus and infraspinatus tendons. Intact biceps tendon. Tendinopathy/thickening of the subscapularis tendon. Intact labrum.

The inferior glenohumeral ligament is intact. Teres minor tendon is normal. No muscle atrophy.

No effusion. Mild subacromial/subdeltoid bursitis. No intra-articular loose body.

## **IMPRESSION:**

- 1. AC joint arthrosis with a small effusion. Lateral downsloping acromion which may be causing impingement.
- 2. Tendinopathy and thickening of the supraspinatus and infraspinatus tendons.
- 3. Tendinopathy/thickening of the subscapularis tendon.
- 4. Mild subacromial bursitis.

Thank you for this kind referral of this patient.
