

170-10 Cedarcroft Road, Jamaica, NY 11432 Tel: 718-206-1000 | Fax: 718-532-0633

PATIENT:

ROUSE, JOSEPH

EXAM DATE:

07/19/2022 4:18 PM

STUDY DESCRIPTION: CT SHOULDER WITHOUT CONTRAST

MRN:

ROUJ65633

DOB:

03/21/1989

REFERRING

Davis, Gordon DO

CLINICAL HISTORY:

NF PAIN DUE TO ACCIDENT

PHYSICIAN: GENDER

M

COMPUTED TOMOGRAPHY OF THE LEFT SHOULDER

HISTORY: Pain due to accident.

TECHNIQUE: Thin axial slices are obtained through the entire left shoulder. Sagittal and coronal reconstructions are obtained.

COMPARISON: None available

FINDINGS:

OSSEOUS STRUCTURES: No fracture demonstrated.

## ROTATOR CUFF:

SUPRASPINATUS: The supraspinatus tendon is grossly intact. No tendon retraction is found. No skeletal muscle atrophy is seen.

INFRASPINATUS: The infraspinatus tendon is grossly intact. No tendon retraction is found. No skeletal muscle atrophy is seen.

TERES MINOR: The teres minor tendon is grossly intact. No tendon retraction is found. No skeletal muscle atrophy is seen.

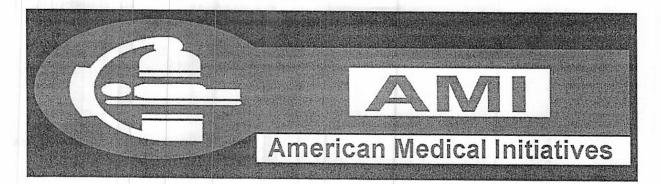

SUBSCAPULARIS: The subscapularis tendon is grossly intact. No tendon retraction is found. No skeletal muscle atrophy is seen.

SUBACROMIAL/SUBDELTOID BURSA: No fluid in subacromial-subdeltoid bursa to suggest bursitis.

MUSCLES: No muscle edema or fatty muscle atrophy by CT.

AC JOINT: Appears intact.

BICEPS TENDON: Grossly intact long-head of the hicens tendon

M

LABRUM/LIGAMENTS: The labra are grossly intact.

CORACOACROMIAL LIGAMENT/ROTATOR INTERVAL: Unremarkable on CT.

GLENOHUMERAL CARTILAGE: Grossly intact articular cartilage.

SYNOVIUM/JOINT FLUID: No joint effusion or synovial thickening.

NEUROVASCULAR STRUCTURES: Normal in course and caliber

PERIPHERAL SOFT TISSUES: Normal.

## IMPRESSION:

Left shoulder is unremarkable. However, CT has limited evaluation of rotator cuff tendons and soft tissue pathology. If there is further clinical concern, MRI of the left shoulder may be obtained as clinically warranted.
